External components Keyboard shortcuts AutoCAD's drawing editing window has various keyboard shortcuts. These include "CTRL + Z" to undo, "CTRL + Y" to redo, "CTRL + Shift + F7" to switch between text and block editing mode, "CTRL + SHIFT + F7" to convert text and block editing mode, "CTRL + F1" to hide/show the keyboard, "CTRL + ALT + F7" to toggle between the multiline and fill and stroke input editing modes, "CTRL + ALT + F2" to toggle between the color bar and palette editing modes, and "CTRL + ALT + F8" to open the color picker. To apply the currently active property setting, use "CTRL + F8". The most commonly used drawing tools are highlighted with an underline. To minimize or close the current drawing window, use the key "CTRL + ALT + ESC". AutoCAD also has an extensive macro recording feature. The macro recorder allows the user to record keyboard and mouse input commands. AutoCAD allows users to create and edit macros. Organizational tools AutoCAD provides tools to organize content such as blocks, sections, or content-appropriate layers. Layers allow users to organize the drawing in a hierarchy of groups, and in turn display these groups to users in a hierarchical view, as well as organize content within the drawing according to a given category. It also allows editing and re-editing information. The drawing window also has a structure view (Sectioning), enabling the user to see how content is organized and related. The drawing can also be resized to fit the screen to the user's convenience. Document templates Document templates allow users to save a drawing with predefined properties. These include the following: Duplication of drawings: Duplication allows the user to make identical copies of a drawing, making a number of drawings identical and reducing the workload for those involved in the process. Save to: Users can save a drawing to an image file, a DXF file, a DOC file, or to an XML file. Preferences: Users can modify the features of a document template before saving. Properties: Users can customize the document template. List template The list template is the default document type, which can be used to create lists of content. It contains a graphical representation of the list a1d647c40b
